

Dual Purpose Electro Magnetic Automatic Fire Closure Plate / Manual closure plate

UK Manufactured & Installed Only By Hydrochute to BS1703
Furnace Tested to BS476: Parts 20 & 22

A bespoke UK-manufactured auto closing Fire Closure Plate (FCP) activated by a smoke/heat sensor. In the event of a fire, the electromagnets will release and the gravity-operated plate will close the chute.

The chute can easily be operated to close the chute for the safe swapping of bins due to the Hydro chute's "spring-free" design and an extra robust steel plate that can withstand the repeated impact of falling debris in the closed position.

The auto closing FCP has a third-party accredited fire rating of 240 mins. The design incorporates an intumescent seal to provide smoke protection. It can be installed as an upgrade to existing chute systems.

Control systems can be integrated into any existing fire alarm system or set up as a stand-alone system.
